Present: Marge Badois, Chair; Gene Harrington, Vice Chair; Bob Maxwell, member; Mike Byerly, member; Deb Lievens, member; Mike Speltz, alternate member; Susan Malouin, alternate member and Jocelyn Demas, alternate member

Absent: Richard Floyd, member; and Mike Noone, member

Also present: Amy Kizak, GIS Manager/Comprehensive Planner; and Beth Morrison, Recording Secretary

Marge Badois called the meeting to order at 7:30 pm with a roll call vote. M Badois appointed J Demas to vote for R Floyd and S Malouin to vote for M Noone

DRC – Sheffield Estates Elderly Housing Site Plan – Map 7, Lot 105 – 8 Gilcreast Rd: Chris Guida, certified wetland and soil scientist from Fieldstone Consultants, PLLC, 206 Elm Street, Milford, NH, introduced himself to the Commission. C Guida told the Commission the proposed project is for 45 elderly housing units on a parcel of land that will have impact to the buffer area of the Conservation Overlay District (COD) to Beaver Brook. He reviewed the plans with the Commission noting that the main stormwater treatment area is in the northeast portion of the site, which is in Derry, NH, pointing out the impacted area along with the drainage line that runs through the site. He pointed out another line running through the development that is for outflow discharge for extreme storm events because there is a surcharge coming out of the drainage area due to the flat topography of the site. He said that the only low enough portion of the site for drainage is along the edge that is has the buffer. He noted that the site is an old gravel pit with a lot of sand left in there making the soils excessively drained. He stated that the land has been disturbed, almost 100%, by the previous owners as it was a storage area for Audley Construction for a number of years. He went on to note that the site is devoid of vegetation and stated the vegetation along the immediate brook is not well established. He explained that it is mostly a restoration area for the area of buffer disturbance. He commented that the area of disturbance is actually a loam pile that was left from the previous owners and they are proposing to remove the loam bringing the buffer back to a useable buffer area. He said that would account for some minor regrading to allow for proper drainage along with the proper outlet for the discharge pipe. He added that the impact for the loam pile is 7,338 SF, which will be removed and replanted. He mentioned that sheet 11 of the plan set shows the plantings. He stated that the area of impact outside of the loam pile is 2,658 SF, which will also be restored and vegetated to function as a buffer area. He pointed out another area of 523 SF of disturbance, which came about because the Fire Department was adamant about having a secondary access for safety purposes. He informed the Commission that they have not formally submitted the Conditional Use Permit (CUP) as they wanted the Commission’s comments and input. M Badois asked if there would be walking trails in the development. C Guida replied that there are some areas for trails and pointed them out on the plan. M Badois asked if this area would be mowed. C
Guida replied that it would not stating it would all be left natural with the exception of a small trail. D Lievens asked what the age group is for this development. C Guida answered that it would be 55 and older. M Byerly asked what the surface of the trails would be. C Guida responded that he was not sure if this had been determined and was open to suggestions from the Commission asking if they would like a woodchip trail. He added that he was not sure if there would be handicap accessible trails and would get an answer for the Commission. M Byerly commented that it is nice to have a trail that runs along the brook, but unfortunately this increases the chance of sediment going into the brook. He recommended the developer follow best management practices for trail building. He added that if they would like to have a handicap portion, he would build a compacted path that leads from the middle of the dirt pile to the loop of the brook terminating in an observation platform, which would allow a minimal amount of compacted material along the brook. C Guida agreed. M Speltz commented that it is nice to have a trail that runs along the brook, but unfortunately this increases the chance of sediment going into the brook. He recommended the developer follow best management practices for trail building. He added that if they would like to have a handicap portion, he would build a compacted path that leads from the middle of the dirt pile to the loop of the brook terminating in an observation platform, which would allow a minimal amount of compacted material along the brook. C Guida agreed. M Speltz asked if there was any recontouring in the area of the dirt pile. C Guida replied that was correct to allow the drainage to flow correctly. G Harrington mentioned that it looks like they are proposing to plant grass in the buffer, but stated that turf is not allowed in the buffer. C Guida stated that it does not have to be grass, but could be a conservation mix that is not mowed all the time. G Harrington remarked that it should not be mowed at all and there should be no lawn care products applied in the buffer. C Guida replied that he agreed and understood, but there might be a need for maintenance at some point in this area, such as the removal of invasive species. He added that this is not proposed to be a maintained lawn that is cut and fertilized every week. M Speltz commented that he read the stormwater system maintenance plan and noted that it requires mowing of the stormwater features. C Guida said that he did not remember reading that, but will talk to the project engineer about this to make sure this is not the case. He reviewed sheet 11 of the plan set regarding the proposed plantings. D Lievens asked if the river birch was going to be planted where it is wet, as it is a tree that likes to have wet feet. C Guida responded that it is not wet in that area, but certainly could be replaced by another birch. M Badois mentioned that building #6 is very close to the buffer and could cause problems when the owners find out they cannot mow because of the buffer. She went on to say that they might want to eliminate half of that building or change the direction that it is entered. C Guida remarked that he would relay these comments to the project engineer, as he is not the project engineer and is not aware of all the details. M Badois told him that there have been other developments like this with houses right up to the buffer that create a plethora of problems. M Byerly said that buffer signs are required to be placed along the perimeter and is not very attractive for someone’s backyard. M Speltz stated that he thought there was a bigger problem with building #7 and part of building #8, because if they were not there, would it be possible to put the swale out of the buffer. C Guida replied that he did not believe that was correct and reviewed the topography. M Speltz remarked that he thought the swale was in the location because of the drainage that is generated from the impervious surface. C Guida stated that there is a small area that drains a certain way, but would pass this along to the project engineer. M Speltz commented that if you do not put any impervious surface in that area, then you would not need the swale. C Guida asked if he
would like to remove building #7 altogether. M Speltz replied that he was hoping they could move the
swale out of the buffer, to the east or southeast, but if that cannot be accomplished then remove
building #7 and Brookfield Way. He mentioned that when they do formally submit the CUP, they will
have a trouble meeting the criteria that it is not done for economic advantage alone. C Guida said that
there has to be some financial break even point for the developer. He wondered what the advantage to
the buffer would be if the swale was not there. M Badois stated that if the swale was not there, it would
not have to be maintained. C Guida agreed noting that the maintenance would be minimal. M Speltz
asked for a detailed account of the surcharge they are expecting from the eastern basin. C Guida
responded that he did not know the exact number off the top of his head and it would be in the
drainage report. M Speltz commented that it was in the material the Commission received, but he could
not figure out at what point the water would start flowing to the west. C Guida expressed his opinion,
that he thought it was going to be a rare event, but would get this information to him. M Speltz asked if
this was a conceptual discussion or if the Commission was approving a CUP. A Kizak said that it was
design review comments on the plans this evening and no CUP yet. D Lievens mentioned that the more
she looks at the plans, she is noting the buffer is being used for drainage, which is not how the buffer
should be used. C Guida remarked that this area is already disturbed and will be restored. D Lievens said
that the clubhouse looks close to the buffer as well. C Guida replied that he believed this was a
permitted use in the buffer. D Lievens stated that she is concerned about what will happen for the
management of the green areas around the clubhouse. C Guida answered that perhaps they could find
another spot for the clubhouse and will look into this. G Harrington asked if the drainage area, which is
technically in Derry, meets the requirements for drainage in Londonderry. C Guida responded that it
does. G Harrington pointed out that there are walkways going through the limited common area of
building #6 as well as the entire swale between unit #7 and unit #8 in the limited common area. He said
that he does not understand how they can ask it to be limited if it is to be maintained as the drainage
swale. C Guida replied that the pipe would be underground and they would have drainage easements or
covenants. G Harrington expressed his opinion that he felt they were putting too much into a small area.
C Guida responded that he understood and would make sure that they had answers to the questions for
the Commission. The Commissioners commented that they would like to see the swale removed from
the buffer, no turf maintained in the buffer, community gazebo should be moved so it is not encroaching
into the buffer, building #6 should not be as close to the buffer to avoid creating a problem with the
backyard, recommend that if any of the proposed trails are built out of compacted material for the
purpose of disabled persons that the compacted material is still pervious and limited to the east side of
Sheffield Way, the trail that is to be constructed along the brook should be constructed using best
management practices for trail building in a way that minimizes any likelihood that sediment from the
trail will migrate into the brook and noted that Beaver Brook is one of the prized perennial streams and
want to take every precaution to maintain the water quality of the stream.

DRC Update – Cross Farm Phase 4, 5, & 6 – Map 6, Lot 59-1 – 200 Nashua Rd – Jack Szemplinski, John
Kalantzakos, Joe Maynard, and Rick Welch introduced themselves to the Commission. S Malouin
recused herself for the discussion. J Kalantzakos told the Commission that they have made significant
changes to the plan that the Commission viewed months ago and believes they have addressed all the
comments. He commented that they submitted a detailed response letter regarding all the DRC
comments as well as the CUP. He pointed out that all units have a minimum of 10 feet of turf space to
any tree line or buffer and all the septic fields are away from the buffer, noting that there are 71 units
that are greater than 50-feet away. He added that they eliminated units, took out a cul-de-sac of
pavement, reduced buffer impact by 13,580 SF, committed to the use of a green-pro state certified
applicator of salts for the plowing and fertilizer with no phosphorus. He remarked that they feel the
comments about economic advantage being the only reason they crossed in area 5, is not the sole
reason for crossing there as there are multiple reasons. He noted that in 2018 they had many meetings
at the state stating there was a collaboration between New Hampshire Department of Environmental
Services (NHDES), Alteration of Terrain (AOT), New Hampshire Fish & Game, Army CORPS and the
Commission regarding the location of the crossing. He said that the end result for the crossing was a
much less productive wetland. M Badois asked if the commitment to use green-pro and fertilizer
without phosphate would be in the condominium documents. J Kalantzakos replied that the
condominium documents are already written and would need a vote of 67% of the unit owners to pass
an addendum that would be recorded, which he thought would be hard to do. He suggested that they
could put this on their site plan, which would memorialize it. M Speltz asked if it was in the storm water
management plan. J Szemplinski replied that it would be. G Harrington asked if the Commission could
look at the CUP application. J Szemplinski reviewed the CUP submission from July with the Commission.
M Speltz asked for the plans to be shown. J Szemplinski reviewed the plans on the screen with the
Commission. He commented that Barn Door Circle as well as two units were removed and the impact
was reduced by 6,700 SF. He said that the Commission was concerned about pond #68 at the last
meeting and they reduced the impact to the buffer from 1600 SF to 1350 SF. He went on to note that
they changed from the Jellyfish filter to a CBS unit, which eliminated the swale in that area and now they
have a small pond #63. He added that rain garden #62 has been eliminated as well. D Lievens made a
motion to approve the Conditional Use Permit with conditions that there will be no phosphorus used in
the fertilizer applications and the salt truck operators will be certified as presented on plan dated
October 6, 2020. M Byerly seconded the motion. The motion passed, 6-0-0, by a roll call vote.

Commission candidates: The Commissioners interviewed two candidates, Rachel Behrens and George
Hermann. Rachel Behrens told the Commission that she is an avid Musquash user, has participated in
 Beautify Londonderry and is interested in the butterfly garden. She asked if the Commission was about
fixing up trails and commenting on plans. M Badois replied that it was all of the above and asked if she
was sent the job description. R Behrens replied that she had not. M Byerly asked if the candidates were
aware of the time commitment reviewing the length of meetings and work done outside of meetings. R
Behrens said that she has no problem with the time commitment. George Hermann told the
Commission that he was on the Commission when it first started. He said that he is retired and would
like to get back involved in the community. He added that he frequents the Musquash and Kendall Pond.
He mentioned that he used to do monitoring when he was on the Commission. M Speltz asked what
positions the Commission is filling. M Badois replied that they are looking to fill one position, but are still
figuring out if it would be an alternate or full-time member. M Speltz asked the candidates if they were interested in full time versus an alternate position. R Behrens said she is interested in any position.

M Badois asked if the alternates would like to move to full time. S Malouin expressed her concern that she does not want to go to an in-person Town Council meeting to be interviewed for the full-time position. She said that if she does not need to go in-person, she is interested in the full-time position. M Badois replied that she did not think S Malouin would need to go as the Commission would write a letter of recommendation. D Paul commented that S Malouin could write a letter for the Town Council to be read and shared at the meeting. S Malouin thanked her for sharing this and told M Badois that she would write a letter for the Town Council. J Demas told the Commission that she cannot commit to a full-time member right now and would like to stay an alternate. M Speltz made a motion to recommend that S Malouin be appointed to a full-time member and G Hermann be appointed to the alternate position as he has previous experience. G Harrington seconded the motion. The motion passed, 6-0-1, with S Malouin abstaining.

Unfinished Business

Faucher bridge: M Byerly told the Commission that five or six volunteers helped to fix it with shims under the corners that were sunk.

Water Resource: A Kizak told the Commission that Town Planner Mailloux received some input from some departments and awaiting input from others. She noted that the Town is currently working on a default budget and they are anticipating the same for next year. She went on noting that Town Planner Mailloux is looking to put together a list of projects from the table that M Speltz complied that could be accomplished within the current budget and staffing. She added that Town Planner Mailloux will present this to the Town Council at one of their November meetings. She said that they will notify the Commission when they know the exact meeting date in November. M Badois asked about the other water study. A Kizak replied that Steve Cotton, Administrative Coordinator, is heading that study and she would reach out and get back to the Commission at the next meeting. M Speltz asked if A Kiazk was familiar with the NHDES Source Water Protection Program for grants up to $20,000. A Kizak responded that they did look into this, but none of the projects qualified.

Monitoring: M Badois informed the Commission that the Merrill property has been monitored. She said that they are planning to monitor the Plummer property on October 24, 2020. D Lievens said that Rockingham Conservation (RCCD) is going to be $650.00 to monitor Ingersoll and was not sure if the Commission would get the $400.00 reimbursement from this given the pandemic. A Kizak told M Badois to email Kevin Smith, Town Manager and Justin Campo, Finance Director, about the RCCD and dues to be paid. A Kizak told the Commission that they received the report from South Road mitigation site #14 final monitoring report from New Hampshire Department of Transportation (NHDOT) today and she would send this out to the Commission.
Stream Brochure: M Badois told the Commission that the brochures and letter are printed. She stated that it costs $1.45 to mail these, which would put them over the budget. She asked for an increase of $500 to cover the cost. S Malouin asked if the cost was due to it being oversized. M Badois replied that was correct. B Maxwell made a motion to authorize the chair to spend up to $500 from the line item budget for the stream brochure mailings. D Lievens seconded the motion. The motion passed, 6-0-1, with a roll call vote. M Byerly suggested only mailing half now and then when the pandemic is over the other half.

NHACC Annual Conference Nov 7: M Badois told members to sign up for this event.

New Business

Plowing: J Demas asked if the Department of Public Works and Engineering (DPW) can plow some of the parking lots to the trailheads over the winter. M Badois said that they have refused in the past, but would reach out again.

Musquash: J Demas asked if there are volunteers to help re-blaze as there is a need. M Badois asked J Demas to give her a list of what she is looking to do and possibly tackle it this weekend. M Byerly suggested that they try and get volunteers and go out the weekend of November 14, 2020. D Paul asked for this information to put in the Times. J Demas suggested that she could go out this weekend with another volunteer to see exactly where it is needed. M Byerly said that Trailways offered to pay for the paint. He said that he thought it would take two days to cover the Musquash. M Speltz suggested the Commission might want to put up a sign letting residents know they are changing the current blazing system.

Other Business

Minutes: The Commissioners went over the public minutes of September 22, 2020. B Maxwell made a motion to approve the minutes as presented. G Harrington seconded the motion. The motion passed by a unanimous roll call vote, 6-0-1, with M Byerly abstaining.

The Commissioners went over the non-public minutes of September 22, 2020. B Maxwell made a motion to approve the minutes as amended. J Demas seconded the motion. The motion passed by a unanimous roll call vote, 6-0-1, with M Byerly abstaining.

Adjournment: M Byerly made a motion to adjourn the meeting at 9:48 p.m. J Demas seconded the motion. The motion passed, 7-0-0, by a unanimous roll call vote, M Badois, G Harrington, D Lievens, B Maxwell, M Byerly, J Demas and S Malouin.

Respectfully Submitted,
Beth Morrison
Recording secretary
