March 2, 2020

The Town Council meeting was held in the Moose Hill Council Chambers, Town Hall, 268B Mammoth Road, Londonderry, NH.

Present: Chairman John Farrell; Vice Chairman Joe Green; Councilor Jim Butler, Tom Dolan and Ted Combes; Town Manager Kevin Smith; Assistant Town Manager Lisa Drabik: Executive Assistant Kirby Brown and

CALL TO ORDER

Chairman Farrell called the Town Council special meeting to order and led the Pledge of Allegiance. This was followed by a moment of silence for all of those who serve us both here and abroad and for the first responders in Londonderry.

PUBLIC COMMENT

Chairman Farrell gave a brief update on PFOA’s in the Town of Londonderry. Chairman Farrell introduced members of NHDES who are here to answer questions regarding PFOA’s for residents. There will be public comment. Chairman Farrell gave a brief history of the situation as well.

Clark Freise, Assistant Commissioner of NHDES went over some of the chemicals that are being found in the water. Freise stated that his mother-in-law lives in Londonderry and he also lives in a town infected. The compounds that are of interest are called PFOS and PFOA’s. Freise went over the difference and how they affect the water. These compounds will accumulate in the environment. They won’t break down.

Jeff Marts, Senior Hydrogeologist at NHDES, touched base on the sections in Londonderry that are most affected my PFOA and PFOS levels. Marts presented a map showing.

Councilor Tom Dolan, stated that he is a State Representative and they discussed an idea for a plan of action. Many people are living with bottled water. Some of the people get the water bought for them, but others are buying it themselves. Councilor Dolan stated that it can be a financial burden on some people. Having Londonderry become a pilot
community where the town would put up some money for a filter system for individuals who do a water test and they test over the limits. You would bring those results to the town and the town would pay for a filtration system for your home, and the state would issue matching funds. And eventually reimburse the town once funds became available. Councilor Dolan asked the Council if they would be interested in this exploratory program to work with the state to come up with a program to do that. Chairman Farrell stated that the town’s legal counsel has advised that this is a program that the town can look at. There was a consensus with the Council to move forward with it.

Bob Ramsay, 26 Ellwood Rd, stated that he has been tested for cancer. Ramsay stated that with the changing of limits, if they test it now, is the stuff moving because of the flow or moving strictly because of the change of levels. Marts stated that the maps presented don’t capture changes over time. Only a few places have been tested over time so we are not sure how PFAST changes over time in Londonderry.

Ray Breslin, 3 Gary Drive, read in a public trust into the record. Breslin stated that these chemicals are leaking out from the Tinkham Superfund Site. Freise stated that that is correct. Breslin also referred to the blasting taking place on 93 and how that is putting chemicals and arsenic into the air and water as well.

Sharma Praveen, 138 Winterwood Drive, asked Freise what the treatment technology currently being performed for PFOA and PFOS. Marts stated that it’s the same treatment that work for both. Praveen asked what the technology behind the sampling is like. Freise stated that there are two methods of testing currently. You want to hire a professional for these tests.

It was discussed whether abatements would be given or looked at for those affected by the water issues.

Freise stated that if you go to the NHDES website, a toxicologist put a report on there that breaks everything down by compound, what is the health condition that is most sensitive, how it gets transmitted to a human being, etc. Freise stated that a lot of these chemicals stay in your body for a long time.

Erik Kolifrath, 9 Kelley Rd, asked about potential programs for homeowners. Kolifrath asked if municipal water is a better solution. Chairman Farrell stated that municipal water system is not properly filtered and regulated and you’re still going to receive the PFOA’s.
Chairman Farrell also stated that the number needs to be zero. It would also go to the ballot and it would take anywhere from three to five years to implement it. Chairman Farrell stated that it would also be extremely expensive for the voters.

Erica Laue, 18 Lancaster Dr, stated that she liked the idea of contributing to funding for individual home treatments for a short term strategy. Laue stated that she would like to advocate for point of entry systems as well.

Lorraine Sheehan, stated that she does like Councilor Dolans filtration system idea but it is expensive to do whole house system. Sheehan stated that since the chemicals are in the air and water, it is not safe to plant anything in your yard and it has ruined a lot of properties up here.

Erin Wessling, 10 Hazelnut Ln, stated that she was at the meeting in Merrimack in October. Wessling asked what the permit status was and if they have received the permit. What is Saint -Gobain being held responsible for? Marts went over what they are required to have now. Wessling asked if the town has their own sites they’re monitoring. Chairman Farrell stated that there was a town-wide water study and it is a learning experience for everyone. Chairman Farrell stated that the town is asking anyone who has tested their well to share it with the town so that we can track them as well.

Deb Paul, 118 Hardy Rd, stated that the arsenic levels do cause cancer and they are very high. Paul stated that the arsenic filter systems run anywhere from one thousand to three thousand dollars and you have to replace them every two to three years and that cost is always going to keep going up. Paul stated that it is all drinking water and it will affect the selling of houses and everything and it needs to be paid attention to. Paul stated that there needs to be a water plan. Chairman Farrell stated that we need to put together another meeting to discuss arsenic and have the specialists that know more about it.

Greg DePasse, 21 Welch Rd, asked if there was anything that can be done on a larger scale rather than just household treatment. DePasse asked when enough is enough. Marts stated that in terms of putting in a town-wide treatment system that would be difficult to clean it all up. For it to clean up on its own, the estimated timeframes is a few decades.

Vinny Curro, 103 High Range Rd, stated that water is being provided to his family form Saint-Gobain. Curro stated that it’s over two-hundred dollars to have your water tested and it is well worth it. Curro asked if letting the state know the results okay. Chairman
Farrell stated to let the Town Managers Office know as well.
